Introduce the project

Give your project a short, clear name.

Name the people you want to help.

Explain the problem in everyday language.

Describe the problem

Use a concrete example of the difficulty.

Explain why the current approach falls short.

Separate what you know from what you assume.

Propose your solution

Describe how someone would use your idea.

Choose two or three essential features.

Explain how each feature addresses the problem.

Plan a small test

Build a simple version of the main feature.

Ask potential users to try it.

Observe what works and what needs improvement.

Explain the next step

Summarize the value of your proposed solution.

Name one limitation you still need to address.

End with a clear request or next milestone.
